

Is your offsite data storage secure?

Contributed by Webmaster

By Sean87 Sean87

Is your offsite data accessible when you need it?

DataBank is Australia's largest IT specific specialist in the field of secure data storage and data protection services. With over 2500 clients across Australia and New Zealand, DataBank has over 1.5 million media items in storage and performs over 4.5 million media rotations per annum. Due to their excellent service and strict protocols the number grows each year.

If you require complete data protection and need to keep track of your digital records, you can utilize DataBank's web-enabled media tracking software. There are over 200 functions that allow clients to track and manage their data inventory securely over the web. DataBank has customized their software for all sorts of data storage requirements. This system helps DataBank clients avoid a number of costly wasted searches for the right backup tape. If there is any specific requirement for audits, then DataBank will tailor a solution. DataBank continues to set the standard to ensure that their clients' data media is protected and locatable at all times.

DataBank offers the highest service levels in data management across Australia and New Zealand. DataBank's priority is the customer and their experience. DataBank offers unmatched levels of data security and confidentiality. This professional data storage service provider has been working for the past 20 years and continues to provide cost-effective and tailor-made solutions for clients' backup and data storage needs. DataBank is also Sarbanes Oxley compliant and ISO 9001 certified.

DataBank vaults are purpose-built to meet and exceed international standards for the protection and preservation of data media. Their vaults are environmentally and climate-controlled, equipped with gas and fire suppression to meet all clients' disaster recovery requirements. Their data storage vaults are located in strategic locations in all capital cities to allow for the timely retrieval of media tapes in industry-leading timeframes.

All DataBank staff are highly skilled full-time employees who understand backup, retention, rotation, archiving and best practice disaster recovery procedures. Their data management personnel are dedicated to specific accounts, assuring the client has the highest levels of service and accuracy. DataBank is acutely aware of its role in the IT disaster recovery process and the data compliance strategy of their clients. For this reason, their data management processes are designed to successfully comply with the most challenging of circumstances.

Today DataBank is one of the leading secure data storage providers servicing over 2500 clients across Australia and New Zealand. DataBank has been in business for over 20 years and its clients will vouch for its tremendous success. DataBank will ensure your offsite backups, mission-critical data and intellectual property are secured utilizing the latest technology and techniques. DataBank will offer sound protection of their clients' media assets while providing around-the-clock access to their data.
